

# Robust Solution for managing Disaster Recovery Exercises

## The Business Challenge

In today's business environment, having disaster recovery is no longer a luxury, it is a necessity. Given the high probability and variety of events that cause outages, including natural disasters (earthquakes, snow storms, flooding) and man-made events (power outages, viruses) a disruption to business systems is not a question of if, but when. Disaster recovery needs to be core to your IT strategy. Following are some of the challenges we came across during disaster recovery solution discussions

- IT disaster recovery and business continuity planning are typically managed in legacy tools
- Planning tools do not have progress tracking capabilities
- Excel based disaster recovery progress tracking and reporting
- Global users participation through email and conference bridges

## The Solution: WinRM (WinWire Recovery Manager)

WinRM is a comprehensive SharePoint-based solution for disaster recovery planning and execution to manage service and business continuity. WinRM helps organizations to automate tracking and reporting of Disaster Recovery & Business Continuity related testing activities for compliance adherence. It transforms the way disaster recovery is done today and in the future and is cost effective, rapid and reliable.

### WinRM – Key features

- Recovery Planning and Automated Tracking
  - a. Ability to create reusable task, application and location template
  - b. Complete DR test, individual or set of apps tests
  - c. Enforcing task dependencies and improving RTO
- Online Check-in & Check-out
  - a. Enhances active participation in the DR events
  - b. Provides granular time tracking of resource scheduling and availability
- Flexible Deployment Model
  - a. Deploy on-premises, recommended to be hosted on DR data center
  - b. Deploy on Azure or any leading Cloud Service Provider environments

- Executive Dashboards
  - a. Real-time status & phase-wise overview
  - b. Progress tracked against RTO
- Integrations
  - a. Integrates with ticketing systems such as Remedy, Service Now, etc., easily
  - b. Integrates with notification tools like MIR3 seamlessly
- Mobile Enablement
  - a. Mobile enabled for executives to review the progress on-the-go.
  - b. Easier task updates for remote employees

## WinWire RECOVERY MANAGER

Improving Your RTOs

## WinRM – Benefits

1. Real-time status tracking of recovery progress
2. Effective global users participation management
3. Replace planning tools & excel based progress tracking
4. Easy to use task updates and attendance tracking
5. Seamless integration with ticketing and notification systems
6. Import Planning data and Export Exercise Data
7. Mobile enabled for executives and remote participants
8. Trending of exercise results over a period of time
